

The title "Business Overview 2020" is displayed in a large, bold, white sans-serif font. The year "2020" is rendered in a teal color, matching the teal geometric shapes in the background. The text is positioned in the lower-left quadrant of the image, overlaid on a scenic landscape.

Business Overview 2020

Who we are

Green Genius is an international renewable energy company that develops, builds, and operates **biogas** and **solar PV power plants**.

10

years of
experience

MODUSGROUP

part of the internationally
renowned Modus Group

150^{GWh}

FROM **SOLAR**
POWER PLANTS

In 2020,
our power plants
generated over

310^{GWh}

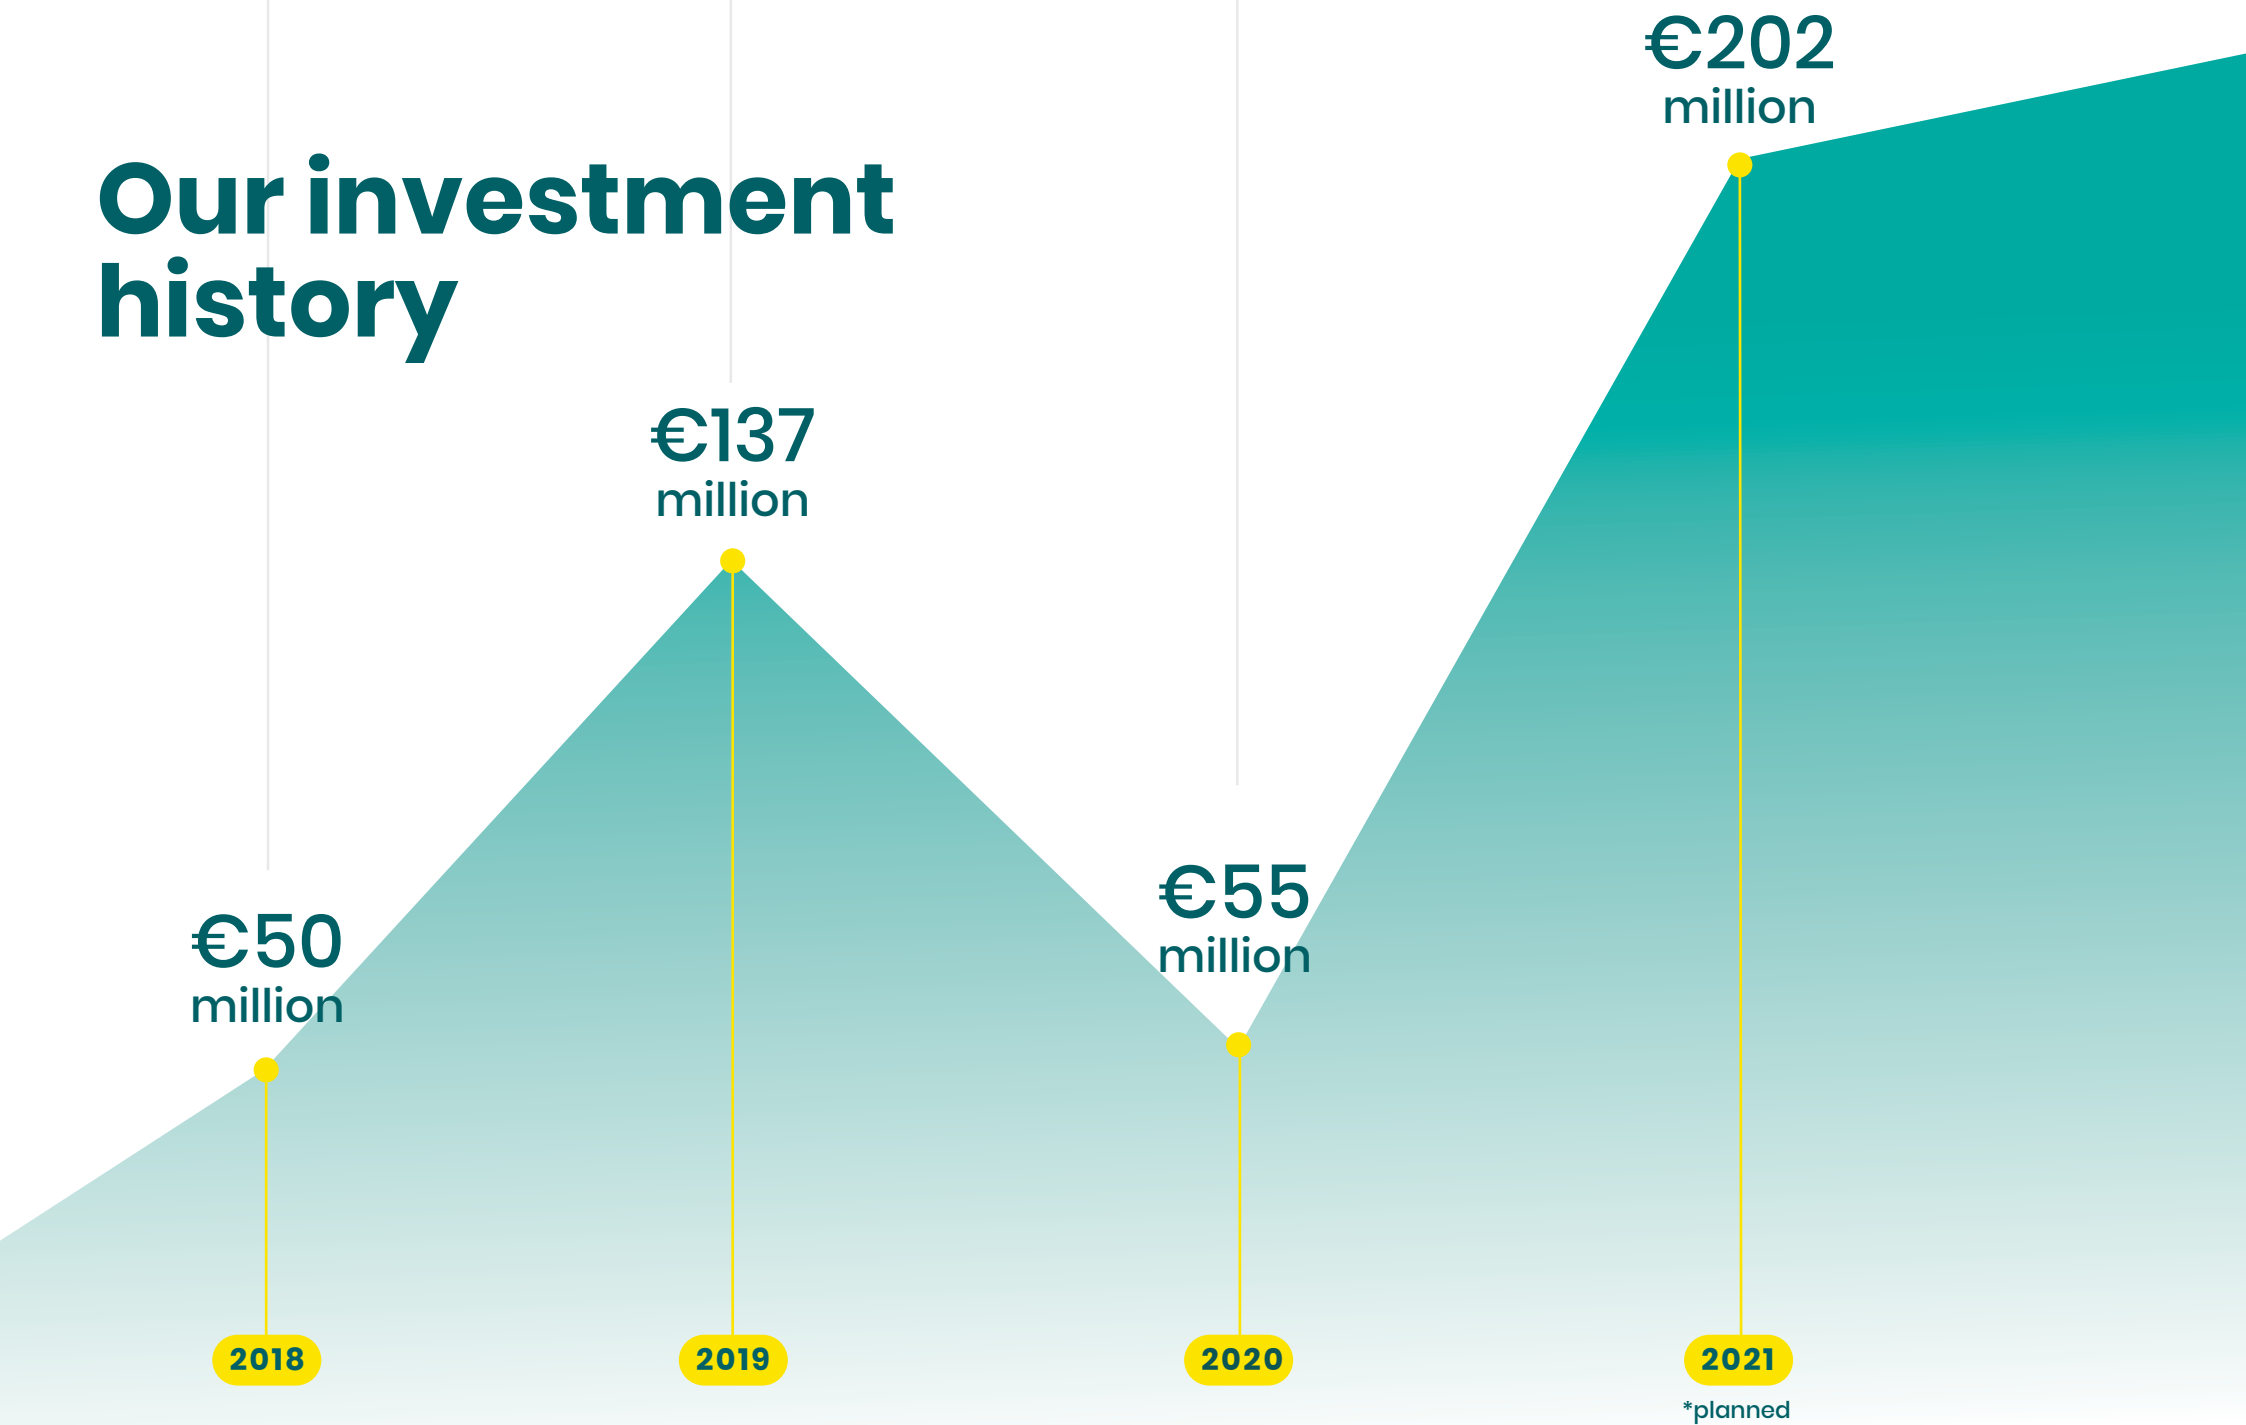

OF ELECTRICITY

160^{GWh}

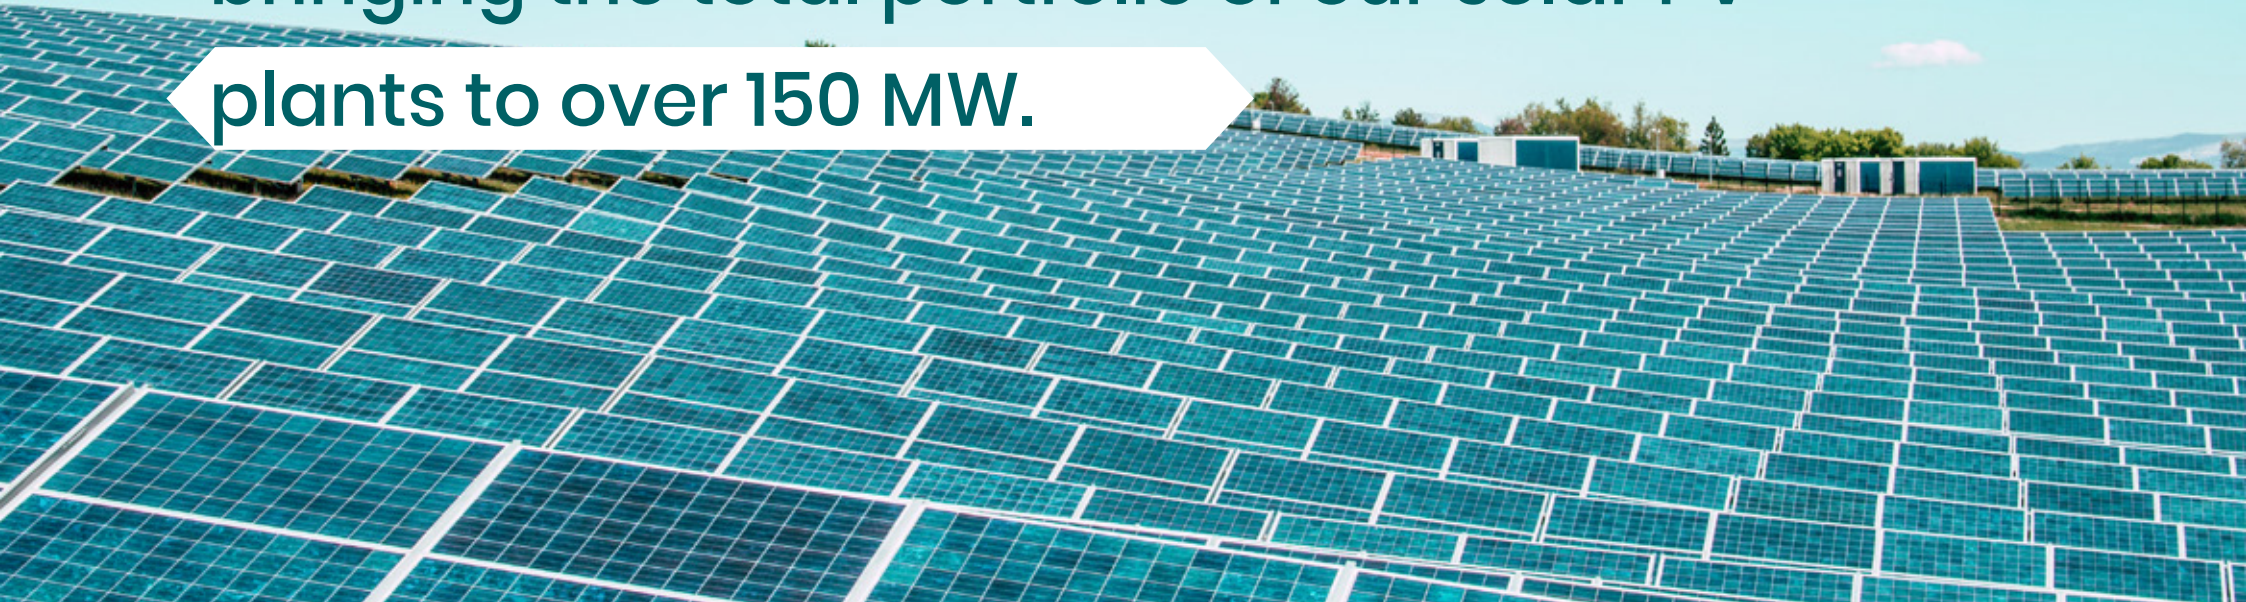

FROM **BIOGAS**
POWER PLANTS

Our investment history

New projects

Over the course of 2020,
we energised 44 new solar power plants,
adding **a total capacity of 73 MW** and
bringing the total portfolio of our solar PV
plants to over 150 MW.

Milestones

Our **48 MW Ukrainian power plants**

started their production of electricity.

The Austrian bank Kommunalkredit refinanced 10 MW of our Lithuanian biogas plants, representing their first transaction in the Baltic countries.

We initiated our **first biogas projects in Poland**, and acquired 2 ready-to-build projects.

Aberdeen Standard Investments (ASI), one of the biggest fund managers in the world, recently purchased 43 MW of solar power plants in Poland from us.

All of our biogas power plants in Belarus were completed, and attained their maximum capacity of 10 MW.

We now provide solar energy from **“remote solar power”** plants in Lithuania.

Employees

The number of people employed by Green Genius grew by 7% in 2020 compared to 2019.

In 2020

208

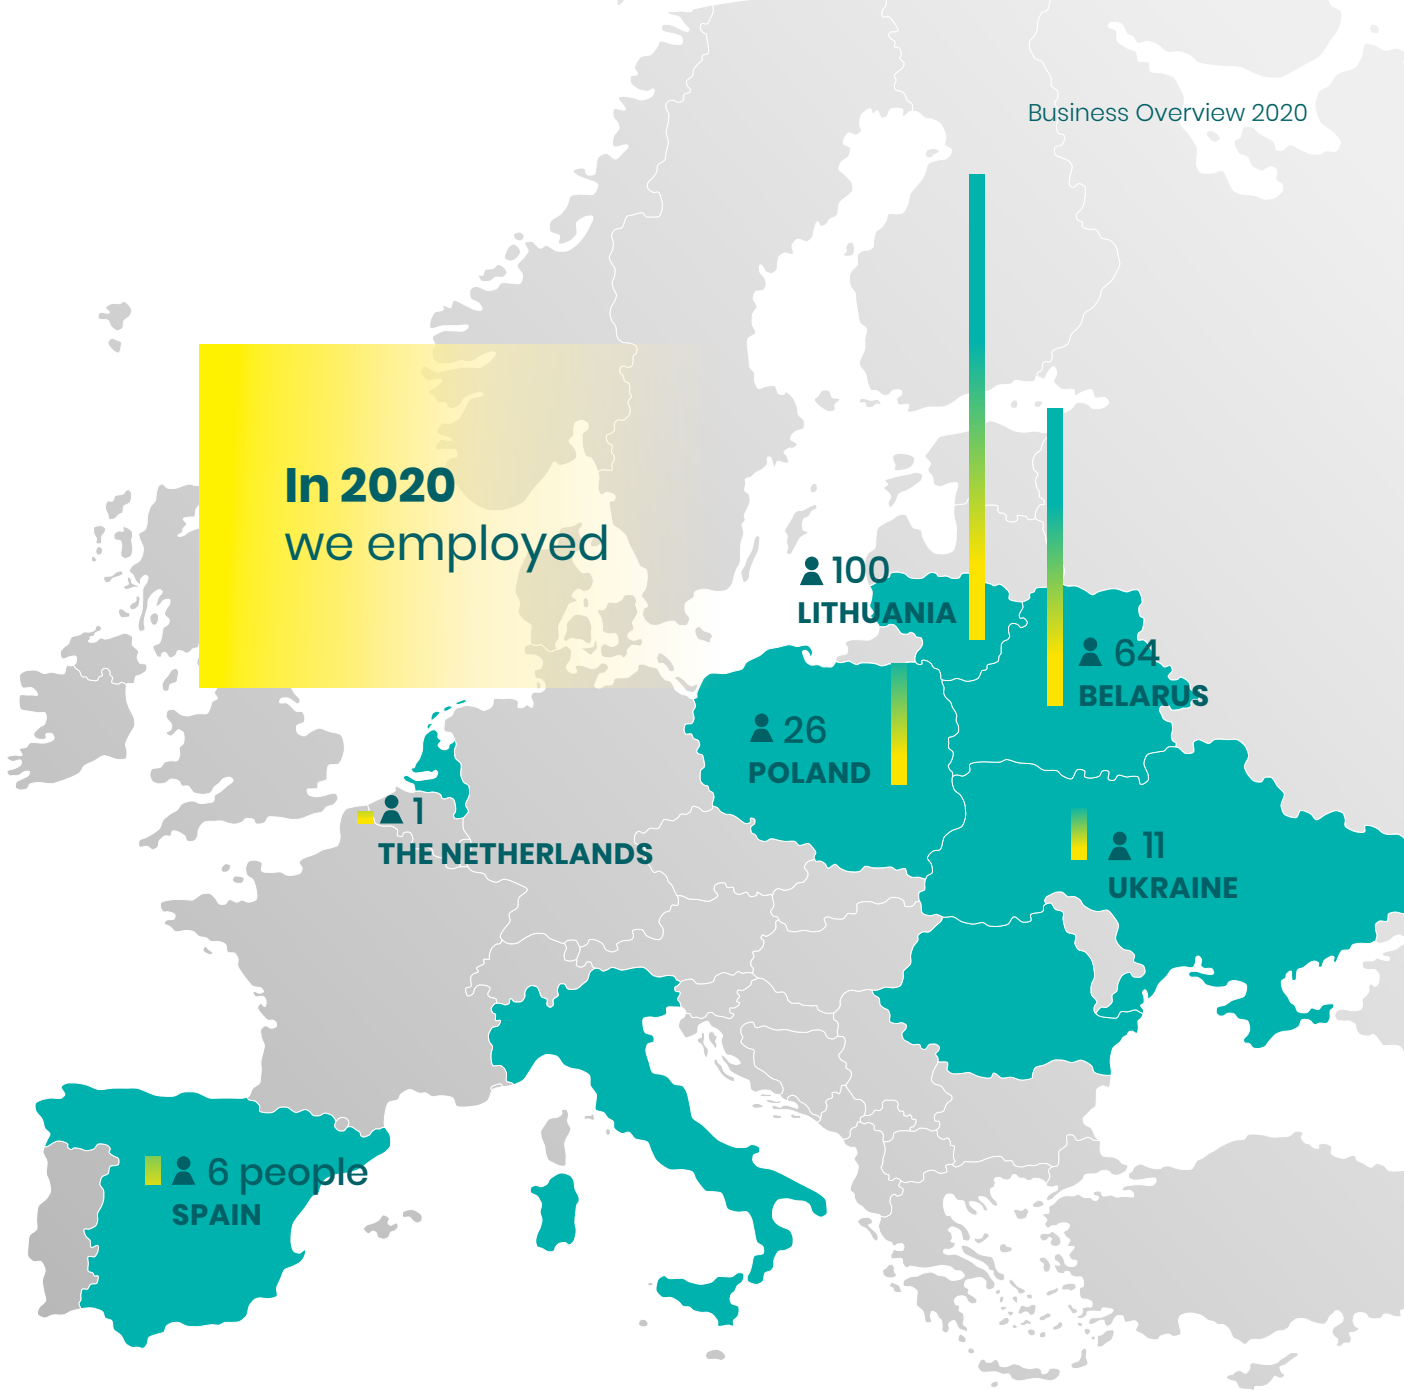

employees

In 2021

30% increase

is planned

In 2020
we employed

Our footprint

Our projects ensure that worldwide
emission of CO₂ is reduced by

280,000

TONS PER YEAR

To otherwise absorb this
amount of CO₂

13 million trees would
need to be planted

A word from our leaders

Ruslanas Sklepovič
CEO

2020 was not an easy year. We had a pandemic, remote work, and no “workation” or business trips, but we still managed to get through it.

We lived, we grew, and we developed. I am more proud of my team now than I have ever been before – every driver, manager, engineer, and member of finance or legal staff. You are devoted, professional, and powerful, and you are saving the world day by day. So, let's keep this passion and love, let's turn it into energy, and let's turn it green.

Simonas Šileikis
Head of solar business

The year 2020 was an exceptional one for the whole organisation – global uncertainties and challenges presented an exceptional test, which I believe we have passed with flying colours.

We have grown as a team, we have strengthened our position in all of the markets where we operate, and we have purified our core business and long-term strategy. I am very optimistic for the future of Green Genius in solar business on a global scale.

Paulius Babrauskas
Head of biogas business

The greatest happiness and joy for me is to have such a dedicated, stress-resistant, professional team that has focused and worked so well together during difficult times.

This is what I call our Green Genius essential distinction – I believe it is in our Green Genius family blood.

Rokas Bancevičius
CFO

The organization has made a huge step in terms of maturity in 2020 despite the global pandemic.

The level of professionalism in terms of our lender relationship, legal structure, financial reporting and other related processes is at par with the best of our peers. This was all achieved by Green Genius people – ambitious, hard-working and always looking to improve. Proud to be part of this team.

Our vision for the future

The projected

**GROWTH
RATE**

of Green Genius' value is

30%

OUR MAIN GOALS

Developing
**NEW
REGIONS**

for solar business –
chiefly Romania

Implementing the
**“PV + STORAGE
BEHIND THE
METER”**

solution in the Azuolyne
biogas plant, and creating
a pilot MICRO system

Securing our place
among the

25

largest renewable energy
developers in Europe

Interesting facts about us

We supplied electricity to the main Christmas tree in Vilnius, the Lithuanian capital.

30 tons —————→ **12,000 kWh**
OF COFFEE GROUNDS GENERATED OF ELECTRICITY

We care about nature, and therefore have accommodated **beehives in our solar power plants** in an attempt to contribute to safeguarding bee populations.
